

The Energy Reality Project is the result of recognizing the lack of understanding of energy in general and how nuclear energy, in particular, is being maligned and misrepresented. Energy production needs to be discussed in a realistic way that takes into account what science has achieved. If we expect science to make a better future then we need to give science the respect it deserves. Nuclear power, realistically, is our only hope.

The biggest obstacle for acceptance of nuclear power is the lack of education. An impending energy crisis and predictions of environmental and ecological disaster has futurists, economists, oceanographers and ecologists all warning us to reduce carbon emissions. We need to regain a vision of prosperity and seek a quality of life where abundant energy is permitted, enjoyed and seen as a way of life once again. Innovation should not make our energy reliability worse and put us at risk of freezing or overheating because renewables are a poor fit to the energy mix. Nuclear energy can save our future, give us back the oceans, clean the air, fix the economy, eliminate most nuclear waste and supply fresh water.

The Energy Reality Project intends to provide outreach and explain how nuclear energy, the pinnacle of modern science, fits into the larger energy picture. Nuclear science needs to be more widely taught to bring about a capable generation of engineers, scientists and literacy in all things nuclear to truly make this a nuclear era.

### **Proactive Goals of the Project - <http://EnergyRealityProject.com>**

1. Acknowledge the pros and cons of each type of energy source.
2. Compare the various energy production methods for electricity and other purposes and demonstrate what energy source is a best match for various locales and locations.
3. Explore complimentary energy sources in a mix and what does and doesn't work.
4. Deliver informed & respectful dialogue to cut through biases and misconceptions;
5. To set up a learning resource that journalists, the general public, students and information givers can fact check and explore.

To be part of the team to make this project a success contact
